* **Photoshop CS0 for Beginners**. _Learning from the Pros_ by André Fiorenza is a very thorough guide to getting started with Photoshop. You'll find out how to do things like control layers and use the zoom tool, which enables you to identify objects in a photo or part of a photo, capture and draw, create and design textures, and more. This book was written for Windows and Mac OS. * **Learn Adobe Photoshop CS5: Step-by-Step by Sarah Whitaker and David A. Thiele**. Part of the Essential Guides series, this book is based on the number-one bestselling Photoshop book of all time, by André Fiorenza and Mike Abosch. Its step-by-step training is firmly aimed at people coming to Photoshop from another program, a lack of prior experience that is common even among professionals. It covers a range of new features and techniques in order to train beginners with a bit of previous knowledge. * **Photoshop CS5 for Mac: Illustrated Edition by Lauren Buckland and Steve Ramsey**. The content is the same as the _Learn Photoshop CS5_ book, but this is a much more accessible book for Mac users, with beautiful color pictures and crisp fonts. * **Photoshop CS5: The Missing Manual by David Sparks, Philip A. David Sparks takes over where André Fiorenza and Mike Abosch left off and provides a complete look at some of Photoshop's newer features, including the new Control Panel, the new Camera Raw 5 filter, layers with masks, and Advanced Retouching. This book is aimed at people who are getting to the point where they need to understand how all these new features work, how they can be used, and how to avoid mistakes. * **Photoshop CS5: The Missing Manual by Robin Williams**. There is also a companion book on Mac, _Photoshop CS5: The Missing Manual for Mac_, which covers the same content as its Windows counterpart, except that you'll learn about how to work with the Mac operating system in depth. * **Photoshop CS5: The Missing Manual for Windows by David Sparks**. As seen on The Tide is Turning Falling Bears have traditionally been a bargain. Their homes, the Bears are expensive. Their credibility, they're cheap. It's a big red flag when a Bear has gone into the tank, not a sign of a dying industry. Taking up the 'Bears are cheap' banner today are the latest numbers from CoStar on the combined inventory of condos and homes that are only a step away from foreclosure. We can sum it up in one sentence: A Bear has never been more overvalued than in 2012. This is the second time I've seen numbers for the combined inventory of partially foreclosed homes and condos, and for all I know this time may be an anomaly. But it's not. It's a trend which is now reversing, in part thanks to a slowing economy and new lending rules for banks. The inventory of properties not under contract is at the lowest level since last October, and it's dropping. (The most recent CoStar reports don't go back this far, but I would expect it to follow the same trend.) Those facts do not bode well for those whose homes are located in the southern Florida real estate markets. Inventory to Sell What do we know? Every month we know that there are a certain number of condos and homes for sale in some price range. We also know that some of those homes are only a few months away from taking the next step and becoming available for sale. We also know that some of those homes sell quickly, and some take longer. And we know that the recent bull market created a huge glut of housing inventory. This doesn't tell us the real estate price of the homes that will be available. That's where a real estate agent comes in. A good real estate agent can not only help you sell the home that is in the worst shape, but negotiate a great price on a home in great shape. So what do we know? We know the inventory is on the move. We know that more and more of that inventory is set to sell. We know that the price of homes which sell the quickest are dropping. This information, which would be very exciting for a buyer, makes a Bears impression! I'm betting that will not change
