hello, i am looking for a photoshop elements 9.0.1 or 9.2 version to use on windows xp. i am a happy adobe customer and am satisfied with the cc product suite, but i feel that the products are not as feature rich on the mac platform. if you can provide this version for download, i will purchase it immediately. i cannot find a version for the mac for either version of elements. i have already purchased one from micro center. hello, i am not sure if it is my mac or if it is a glitch, but the latest version of adobe photoshop elements 11 is not installing on my mac. i downloaded the 64 bit version and i am downloading it onto my windows 8 machine. i am going to install it on my windows 7 machine also. if you can help me with this, i would appreciate it. i can send you the link to the adobe download link. hello, i am a happy adobe customer. i am not sure if this is a glitch or i need to do some work to get my mac to install the latest version of

photoshop elements, but the latest version is not installing. activate your elements products to validate your software license and associate them with the computers on which you use those products. activation is a mandatory process that requires the software to connect to adobe servers via the internet. activation helps protect your computers and environment from malicious code by verifying that you have genuine adobe software. i recently purchased photoshop elements 11 from the apple store and the problem is that, when i try to save a file, nothing happens. it opens the file, but won't save it. i need to force quit and restart it. the computer is running windows 7. i have uninstalled and re-installed photoshop elements many times and still nothing happens.

i dont know if anybody can help me but i would like to ask about photoshop, is it really a good tool for me to work with? i have no experience in using any kind of image editing software, so i'd like to know whether i can trust in it or not. i love this software for video editing, but i really have a problem with the main program. i've tried to learn how to use it, but there is a very complicated setup i don't understand. i'm not a programmer, just want to learn the basics for video editing. is it possible to make a video without using photoshop? i would like to know if it is possible to create a video out of a series of photos. with the sequence of photos i mean to say that i do not have a specific sequence of photos in mind when i am creating a video. i would rather use something like camtasia or adobe premier elements and then transfer the results to photoshop. i hope that this

makes sense. i have a fairly new laptop and i have downloaded a basic copy of photoshop elements 10 but it says that my graphics memory is only 256mb. my other adobe products work fine. is there any way to increase the graphics memory? hello, i am very unhappy with adobe and the premiere elements 11. i installed late last summer and was working just great until in january when it will no longer load. i have talked with adobe help line and they had suggested to uninstall and re-install completely which i have done several times now. i have also taken their advice and updated all of my graphics drivers etc. i have even tried to install the 64bit version as i thought this may be the problem since i am running 64 and did not install this in the summer but the 32bit version.
