Applications like Photoshop Cs6, are nice options to access the camera and take pictures remotely. If you have a Mac, I'm sure you've heard of "Remote" or "AirServer". However, this is one of the first times that remotely takes pictures from a program on a mobile device. It also means it is just as easy to set up in the iPhone as well. We're big fans of the new AirServer app, which has a number of new features enabled for AirServer 2. I've been using Photoshop since version 1.0, so it's been a while, but with Lightroom nowadays, I'm relying less on Photoshop since I know that I can completely dodge that task. However, I'm quite happy with the new way in which PS now handles layers. When working with an adjustment layer, you can select the layer tool and then include or exclude the layer in a group by pressing shift and clicking on the layer you want to include or exclude. This makes defining and saving an adjustment layer easier and faster. I found this particularly useful in terms of defining a layer mask. For example, I often add shape or text layers to my photos to indicate where the subject is. Then, I define an adjustment layer mask so that I can quickly turn off the layer mask for the layer and create a copy of it before saving. I'm not a big fan of the new color management panel and would have preferred that it would be a launchable plugin as it is for Lightroom, but I'm sure that it will become something of a fairly common utility in Photoshop. Perhaps the easiest thing of which I will miss is how I used to quickly move between Layers, Flatten, and other options in the File menu. It's also interesting how, in the Tools menu, saving to Photoshop CS6 is enhanced with the option to create a new PSD file and the ability to create sprite sheets.

Adobe has announced that with CS6, you will be able to add Live Adjustments, which are similar to adjustment layers, to any image. LiveAdjustment layers are added as a separate layer to the image before you start working on it. You can adjust the opacity and position of Live Adjustment layers as you work on them. These new features are still available only in the CS6 version of Photoshop, and not the Creative Cloud versions like CS5.5, CS5.0 and CS4. With Live Adjustments, you can adjust pixels in an image and ensure that they match the precise content of the rest of the image. LiveAdjustments are useful for correcting a discolouration of your photo. The most popular image editing tool to date, Adobe Photoshop is the gold standard for creative professionals. It was the first and leading light of Adobe's entire software portfolio. The

Photoshop team also offers new features for designers and photographers, including an update to the selection tool, improvements to importing and exporting workflows, and a new logo (.jpg) format.
