The highlight is that this is the first release of Photoshop without the Photoshop CS moniker, replacing it with Lightroom (as we have experienced before) which is a Photoshop alternative focused on reinventing the capture and production workflow for photographers. Lightroom, instead of feeling like a photographer's dream tool, is a simple and streamlined post-production and editing workflow tool. It is also the only software of its kind to give you the ability to enhance, retouch, restore, correct and repair your pictures all with Adobe Creative Cloud or the Adobe Creative Suite. While I feel Photoshop will continue to be the more "stable" edition of the Adobe Creative Cloud, Lightroom is definitely gaining popularity, particularly among amateur photographers, with their lazy eye and lax parenting. I won't get into more detail about the new feature enhancements and improvements as I don't know if I will serve as a reliable reviewer for this product going forward due to the recent changes Adobe made for promoting its new software. *Have you ever tested or used Lightroom? What do you think of it? Share your thoughts in the comments section below. And, for more tips and tricks on the latest software releases, follow me on Facebook, Twitter and Pinterest.*

Our favorite new feature of the Photoshop Creative Cloud Photoshop Creative Cloud is the ability to save your images in the cloud where they are being automatically categorized and linked to other similar images. This makes photo management easier as well as being an asset to professional photographers. It also works in the cloud to allow access to your files anywhere, across all your devices. This functionality works for developing a gray-scale film, for colour adjustments, cropping and masking, using sliders, etc. Adobe Camera Raw 9.3 was released in Nov 2016, which offers several enhancements making it more exciting. It also enhances raw conversions giving RAW image editors additional controls for fine tuning and adjusting.
